KEY FEATURES AND BENEFITS

On-access and on-demand scanning	Scan all files and protect your device from threats regardless of possible point of entry — everything archived on your device or through wireless connections (Bluetooth, Wi-Fi, etc.).
Firewall	Monitor all incoming and outgoing communication based on a set of rules that you define to prevent unwanted breaches.
SMS/MMS antispam	Define trustworthy contacts via customizable black- or whitelists or simply block unknown numbers.
Logs and statistics	Stay up to date on all completed scanning tasks and scheduled security audits.

ENHANCED SECURITY FEATURES

Antitheft	Prevent unauthorized access to your data in case of device loss or theft.
Remote wipe	Delete all the data (including contacts and messages) on your phone with a single SMS, preventing it from falling into the wrong hands.
SIM matching	Define a list of trusted SIM cards and receive notification in case of unauthorized SIM insertion, including the card's telephone number, IMSI and EMEI.
Quarantine	Choose between deleting infiltrations right away, isolating them or restoring objects that the user determines to be safe.
Security audit	Schedule regular diagnostics of all vital phone functions, including battery life, free disk space, running processes, Bluetooth and device visibility. Take action on the spot to reduce your risk profile.

SYSTEM REQUIREMENTS

Operating systems	Windows Mobile 5.0, 6.0, 6.1 and 6.5 Symbian S60 3rd Edition Feature Pack 1 or 2 Symbian S60 5th Edition
Free memory	1 MB
